Summary

Software developer focused on backend and full-stack development. Experienced with Go, SQL, Next.js, Tailwind CSS, PostgreSQL, Docker, Git, and Linux. Build practical applications through project-based development, with current work focused on APIs, authentication, databases, and software architecture.

Technical skills

Languages:	Go, SQL
Frontend:	Next.js, Tailwind CSS
Backend:	Go, Gin, REST APIs, JWT
Database:	PostgreSQL
Tools:	Git, Gitea, Docker, Linux, VS Code
Concepts:	Data Structures, Algorithms, API Design, Authentication, Database Design

Projects

VECAI | Construction Technology Platform

Go · Gin · PostgreSQL · Next.js · Docker

- Developing authentication, database models, REST APIs, and backend architecture.
- Designed workflows for projects, architects, quantity surveyors, suppliers, quotations, BOQs, and timelines.

LEM-IN | Ant Colony Pathfinding

Go · Graph Algorithms · Data Structures

- Built a pathfinding program that parses ant-farm maps and determines efficient routes through a graph.
- Implemented graph traversal and pathfinding logic while handling rooms, tunnels, ants, and movement constraints.
- Applied algorithmic problem-solving, data structures, testing, and debugging in Go.

Experience

Apprentice Developer | Zone01 Kisumu

Present

- Develop software through intensive project-based learning using Go, Git, algorithms, and data structures.
- Debug, test, document, and improve software collaboratively.

Education

BSc. Computer Science | Maseno University

2023 – Present
